

CLAUDE — BUILD MY PREMIUM UX/UI DESIGN PORTFOLIO

Implementation-ready master prompt for Claude. Feed this document to Claude Code / Claude when building the portfolio.

CLAUDE — BUILD MY PREMIUM UX/UI DESIGN PORTFOLIO

You are acting as my:

- Senior Product Designer
- UX/UI Designer
- Creative Director
- Design Systems Designer
- UX Researcher
- Front-End Engineer
- Interaction Designer
- Motion Designer
- Portfolio Art Director

Your job is to **design and build my complete personal portfolio website**, not merely provide recommendations.

The final website must look like a highly polished portfolio of an experienced multidisciplinary UX/UI/Product Designer.

Do not create a generic AI portfolio.

Do not use a generic portfolio template.

Do not create a collection of random cards.

The portfolio itself must demonstrate excellent UX, UI, visual design, interaction design, responsive design, accessibility, storytelling and front-end implementation.

01 — DESIGNER PROFILE

Name:

TABREZ ZAIDY

Professional positioning:

UX/UI Designer

Product Designer

Graphic Designer

Motion Designer

Experience:

7+ years in Graphic Design and UI/UX Design

2+ years in Motion Design

Additional experience:

- Product Design
- UX Strategy
- Information Architecture
- Interaction Design
- E-commerce UX
- Healthcare UX
- Conversion-focused UX
- Design Systems
- Responsive Web Design
- Visual Design
- Branding
- Motion Design
- Developer Collaboration
- Project Management

Design software / technologies I have experience with include:

Adobe Illustrator

Adobe InDesign

Adobe After Effects

Adobe Premiere Pro

Figma

WordPress

WooCommerce

Webflow

Framer

React

Next.js

PHP

Laravel
HTML
CSS
JavaScript
Jira
Bitbucket

Only present these as skills where appropriate.

Do not claim expertise beyond the information provided.

02 — CORE POSITIONING

The portfolio should position me primarily as:

A multidisciplinary UX/UI and Product Designer who combines product thinking, visual design and motion to create better digital experiences.

The secondary differentiator is:

Strong graphic-design and visual-communication experience.

The tertiary differentiator is:

Understanding of development and implementation.

The portfolio should communicate:

UX thinking
+
Visual craft
+
Business awareness
+
Technical understanding

03 — HERO MESSAGE

Create a strong, concise hero.

Primary direction:

I design digital experiences that make complex things feel simple.

Supporting text:

UX/UI and Product Designer with 7+ years of experience across digital products, e-commerce, healthcare, branding and motion.

Potential secondary line:

From strategy and user flows to interfaces, design systems and motion.

CTA:

View Selected Work →

Secondary CTA:

Let's Talk →

Availability indicator:

Available for selected freelance & product design opportunities

Do not make unsupported claims.

04 — VISUAL PERSONALITY

The visual identity should combine:

EDITORIAL DESIGN

+

PRODUCT DESIGN

+

DIGITAL STUDIO

+

PERSONAL BRAND

Desired feeling:

Sophisticated

Confident

Intelligent

Minimal

Experimental

Human

Precise

Contemporary

Professional

Avoid:

Generic SaaS design

Overused gradients

Excessive glassmorphism

Excessive rounded cards

Random blobs

AI-looking visuals

Excessive 3D

Template-like layouts

Huge meaningless text

Dribbble-only presentation

Excessive animations

Unnecessary cursor effects

The design should feel intentionally art-directed.

05 — REFERENCES / INSPIRATION

Study current high-quality UX/Product Design portfolio patterns.

Look for patterns involving:

- strong editorial typography
- case-study storytelling
- large project visuals
- outcome-focused narratives
- asymmetric grids
- immersive project presentations
- clear information hierarchy
- minimal navigation

- sophisticated transitions
- restrained color systems
- strong personal positioning

Use these as inspiration only.

NEVER copy:

- layouts
- code
- branding
- illustrations
- copy
- exact interactions
- visual identity

Create an original portfolio.

06 — INFORMATION ARCHITECTURE

Create:

HOME

WORK

ABOUT

CONTACT

Individual project pages:

/work/online-pharmacy

/work/healthcare-platform

/work/travel-vaccination

/work/ecommerce

/work/brand-identity

/work/motion-design

Optional:

/resume

07 — HOMEPAGE STRUCTURE

Build the homepage in this exact conceptual order:

01 Navigation

02 Hero

03 Selected Work

04 Featured Case Study

05 More Work

06 Capabilities

07 Design Process

08 Experience

09 Design Systems

10 Graphic Design / Visual Work

11 Motion Design

12 About

13 Contact CTA

14 Footer

Do not make every section visually identical.

Create rhythm.

Alternate:

large image

small text

small image

large text

full-width project

split layout

editorial grid

08 — NAVIGATION

Desktop navigation:

TABREZ ZAIDY

Work

About

Contact

Optional:

Resume

CTA:

Let's Talk →

Navigation:

- sticky
- compact
- elegant
- accessible

On scroll:

- reduce height
- subtle background
- slight blur
- subtle border

Mobile:

hamburger menu

Menu animation:

subtle

fast

accessible

Support:

Escape to close

keyboard navigation

focus trap where appropriate

09 — HERO DESIGN

Use a large editorial headline.

Do not make it look like a SaaS landing page.

Hero composition:

LEFT / PRIMARY:

Huge headline

RIGHT / SECONDARY:

Short introduction

CTA

Availability

Possible visual:

A curated collage of:

UI screens

wireframes

design tokens

typography

motion frames

graphic design elements

The collage should feel like an intentional design-artifact composition.

10 — HERO PLACEHOLDER IMAGE

If no personal image is supplied:

DO NOT invent a realistic portrait of me.

Instead create an abstract designer workspace / visual identity composition.

Use:

UI fragments

grid

typography

wireframe fragments

design-system components

motion frames

Do not imply that the visual is a photograph of me.

11 — SELECTED WORK

Create a highly visual project section.

Headline:

Selected Work

Supporting copy:

A selection of digital products, e-commerce experiences, healthcare platforms and visual systems.

Projects:

01

Online Pharmacy Experience

02

Healthcare Management Platform

03

Travel Vaccination Platform

04

E-commerce Experience

05

Brand Identity

06

Motion Design

12 — PROJECT CARD SYSTEM

Do NOT make six identical cards.

Use different compositions.

PROJECT 01:

Full-width hero project

PROJECT 02:

50/50 layout

PROJECT 03:

Large image + editorial text

PROJECT 04:

Asymmetric grid

PROJECT 05:

Visual collage

PROJECT 06:

Motion preview

Each project includes:

Number

Category

Title

Short description

Role

Year

Tools

CTA:

[View Case Study →](#)

13 — PROJECT 01

ONLINE PHARMACY

Title:

Reimagining the Online Pharmacy Experience

Category:

UX/UI

E-commerce

Healthcare

Conversion

Show:

Homepage

Category page

Product page

Prescription upload

Dosage selection

Quantity selection

Cart

Checkout

Savings calculator

Trust content

Mobile experience

UX problem:

Users need to understand products, pricing, prescription requirements and ordering steps while feeling confident about purchasing medication online.

Design challenge:

Simplify the journey without removing important healthcare information.

Design focus:

Information architecture

Product discovery

Trust

Conversion

Accessibility

Responsive design

14 — PLACEHOLDER IMAGES FOR PROJECT 01

If actual screenshots are unavailable, generate polished placeholder UI.

Create:

01 desktop homepage

02 product category

03 product detail

04 prescription upload

05 dosage/quantity selector

06 cart

07 checkout

08 savings calculator

09 mobile homepage

10 mobile product page

These placeholders should look like real UX case-study work.

Do not use random stock images.

Use realistic UI.

15 — PROJECT 02

HEALTHCARE MANAGEMENT PLATFORM

Title:

Simplifying Complex Healthcare Operations

Category:

Product Design

UX/UI

Healthcare

SaaS

Show:

Dashboard

Patient management

Care tasks

Scheduling

Routes

Notifications

Mobile application

Core narrative:

Complex healthcare workflows were transformed into clearer operational experiences.

Show:

Problem

Research

Workflow mapping

Information architecture

Wireframes

Dashboard design

Mobile design

Design system

Outcome

Do not invent quantitative results.

Use:

[ADD VERIFIED RESULT]

where necessary.

16 — PLACEHOLDER IMAGES FOR PROJECT 02

If actual screenshots are unavailable, generate polished placeholder UI.

Create:

01 dashboard

02 patient management

03 care task workflow

04 scheduling

05 routes

06 mobile application

These should share one coherent healthcare product design system.

17 — PROJECT 03

TRAVEL VACCINATION PLATFORM

Title:

Designing a Better Travel Vaccination Journey

Category:

UX/UI

Healthcare

Travel

Show:

Travel destination

Province selection

Vaccination information

Consultation

Booking

Appointment flow

Mobile experience

Use realistic placeholder UI.

18 — PROJECT 04

E-COMMERCE EXPERIENCE

Focus on:

Product discovery

Navigation

Search

Filtering

Product comparison

Product detail

Cart

Checkout

Show:

Before

Problem

Opportunity

After

Do not fabricate business results.

19 — PROJECT 05

BRAND IDENTITY

Category:

Graphic Design

Brand Identity

Visual Communication

Show:

Logo

Typography

Color

Grid

Business cards

Posters

Social media

Marketing collateral

Digital applications

This section should demonstrate my graphic-design background without overwhelming the UX/Product positioning.

20 — PROJECT 06

MOTION DESIGN

Category:

Motion Design

Visual Design

Show:

Storyboard

Style frames

Typography animation

Transitions

Keyframes

Final compositions

If video is unavailable:

Create high-quality motion-design frame placeholders.

21 — CASE STUDY TEMPLATE

Create a reusable CaseStudy component.

Structure:

CASE STUDY HERO

Project overview

Challenge

Context

Research

Research insights

Problem definition

Opportunity

Information architecture

User flows

Wireframes

Design exploration

Visual direction

Design system

Final interface

Responsive design

Interaction design

Prototype

Development collaboration

Outcome

Learnings

Next project

22 — CASE STUDY HERO

Show:

CATEGORY

PROJECT TITLE

One-sentence summary

Role

Duration

Team

Tools

Platform

Large visual

Then:

Scroll to explore ↓

23 — CASE STUDY STORYTELLING

Do NOT write enormous paragraphs.

Use:

Short text blocks

Large headings

Pull quotes

Metrics

Annotations

Diagrams

Screenshots

UI comparisons

Timeline

Cards

User flows

Wireframes

Design-system examples

The visual storytelling should carry much of the narrative.

24 — CASE STUDY VISUAL LANGUAGE

Use:

Full-bleed screenshots

Browser mockups

Mobile device frames

Floating UI screens

Annotated screenshots

Side-by-side comparisons

Before/after

Zoomed details

Component breakdowns

Do not put every image inside a generic rounded card.

25 — PLACEHOLDER IMAGE ENGINE

Build a reusable placeholder image strategy.

Each placeholder must contain metadata:

placeholder: true

Example:

```
{  
src: "/placeholders/pharmacy-home.png",  
alt: "Placeholder pharmacy ecommerce homepage",  
placeholder: true  
}
```

The placeholder must be easy to replace later.

26 — PLACEHOLDER ASSET DIRECTORY

Create something similar to:

/public
/images
/projects
/pharmacy
/healthcare
/vaccination
/ecommerce
/branding
/motion
/about
/placeholders

If the environment does not support actual image generation:

Create sophisticated SVG placeholder compositions instead.

IMPORTANT:

Never use broken image links.

Never leave blank image containers.

27 — SVG PLACEHOLDERS

Where appropriate, generate SVG mockups.

For example:

Browser frame

Mobile phone frame

Dashboard

Product page

Checkout

Analytics dashboard

Healthcare interface

Use actual vector UI inside the SVG.

The placeholder should be visually credible.

28 — DESIGN SYSTEM

Create a portfolio-level design system.

Tokens:

Colors

Typography

Spacing

Grid

Radius

Shadows

Motion

Breakpoints

Z-index

Containers

29 — COLOR SYSTEM

Start with:

Background:

#F5F4F0

Primary text:

111111

Secondary text:

6B6B6B

Border:

#D9D8D3

Accent:

Choose one sophisticated accent color.

Do not use more than necessary.

Use CSS variables.

30 — TYPOGRAPHY

Choose ONE primary font.

Preferred:

Inter

Manrope

Geist

Satoshi

Plus Jakarta Sans

Select whichever produces the strongest portfolio.

Typography should have:

Display

Heading

Body

Caption

Label

Code / metadata

Use:

clamp()

for responsive typography.

Hero should feel editorial.

31 — SPACING

Create a consistent spacing system.

Example:

4

8

12

16

24

32

48

64

80

96

128

160

Do not arbitrarily mix spacing values.

32 — GRID

Desktop:

12 columns

Tablet:

8 columns

Mobile:

4 columns

Maximum content width:

1440–1600px

Use large whitespace.

Allow deliberate grid-breaking layouts.

33 — RESPONSIVE BREAKPOINTS

Support:

320px

375px

390px

480px

768px

1024px

1280px

1440px

1600px+

Test every major section at:

Desktop

Tablet

Mobile

34 — MOBILE UX

Do not simply stack desktop sections.

Redesign layouts for mobile.

Consider:

Thumb reach

CTA placement

Typography

Image crop

Navigation

Project scanning

Case-study navigation

Touch targets

Minimum touch target:

44px

35 — INTERACTION DESIGN

Implement subtle interactions.

Project card:

Image scale

Title movement

Arrow movement

Metadata transition

Navigation:

Active state

Scroll state

Hero:

Subtle entrance

Images:

Reveal animation

Sections:

Fade + translate

Do NOT animate everything.

Motion must communicate hierarchy.

36 — SCROLL EXPERIENCE

Create a polished scroll experience.

Use:

IntersectionObserver

or an appropriate lightweight animation solution.

Sections should enter naturally.

Avoid:

constant parallax

excessive transforms

scroll-jacking

heavy animation

37 — CASE STUDY PROGRESS

On case-study pages add:

Reading progress indicator

or

Case-study section navigation

Example:

Overview

Challenge

Research

Process

Design

Outcome

Make it easy to understand where the user is.

38 — DESIGN SYSTEM SHOWCASE

Create a section showing:

Colors

Typography

Buttons

Inputs

Cards

Navigation

Tabs

Badges

Forms

Tables

States

Icons

Do not use FontAwesome.

Use custom SVG icons.

39 — UX PROCESS SECTION

Create:

Discover

↓

Define

↓

Explore

↓

Design

↓

Test

↓

Refine

↓

Ship

Each step should contain a short explanation.

40 — EXPERIENCE TIMELINE

Create a clean editorial timeline.

Do NOT invent employer names or dates.

Use placeholders where missing:

[COMPANY]

[ROLE]

[YEAR]

or structure the section around experience categories rather than fabricated employers.

41 — CAPABILITIES

Create capability groups.

PRODUCT DESIGN

UX Strategy

User Flows

Information Architecture

Interaction Design

Wireframes

Prototyping

UI / VISUAL

UI Design

Typography

Visual Systems

Art Direction

Brand Identity

GROWTH / E-COMMERCE

Conversion UX

Product Discovery

Landing Pages

Checkout

Content Hierarchy

MOTION

Motion Design

Micro-interactions

After Effects
Premiere Pro

DESIGN + DEVELOPMENT

Design Systems
HTML
CSS
JavaScript
React
Next.js
WordPress
Webflow

42 — ABOUT PAGE

Create a richer About page.

Sections:

Intro

Design philosophy

Experience

Capabilities

Tools

Personal interests

Contact

Suggested copy direction:

"I work across UX, UI, visual design and motion — often moving between product strategy and the smallest interaction detail.

My background in graphic design taught me how to communicate visually. Product design taught me how to solve problems systematically."

Do not over-write.

43 — PERSONAL SECTION

Optional:

Outside the pixels

Include:

Travel

Motorcycling

Photography

Technology

Design exploration

If actual photography is unavailable:

use tasteful placeholder photography.

Do not generate a fake photograph of me.

44 — CONTACT

Create a dramatic but minimal final CTA.

Headline:

Have a problem worth designing?

Supporting:

Let's talk about the problem, the users and what success looks like.

CTA:

Start a Conversation →

Other:

LinkedIn

Behance

Dribbble

Resume

Use placeholders for links not provided.

Do not invent URLs.

45 — FOOTER

TABREZ ZAIDY

UX/UI Designer · Product Designer · Visual Designer

Work

About

Contact

Resume

LinkedIn

Behance

Dribbble

© 2026 Tabrez Zaidy

46 — ACCESSIBILITY

Implement:

Semantic HTML

Proper headings

Keyboard navigation

Focus states

Accessible navigation

Alt text

Accessible forms

Color contrast

Reduced motion

ARIA only when necessary

Do not depend solely on hover.

All interactive controls must work on keyboard and touch.

47 — PERFORMANCE

Optimize for:

Fast initial load

Minimal JS

Lazy-loaded images

Responsive images

Modern image formats

Font optimization

No layout shift

No unnecessary dependencies

Avoid massive animation libraries.

48 — SEO

Create:

Title

Meta description

OpenGraph

Twitter metadata

Canonical URL placeholder

Structured data

Clean URLs

Semantic HTML

Project-specific metadata

Example:

Title:

Tabrez Zaidy — UX/UI & Product Designer

Description:

UX/UI and Product Designer specializing in digital products, e-commerce, healthcare and visual design.

49 — COMPONENT ARCHITECTURE

Use reusable components.

At minimum:

Navbar

MobileMenu

Hero

Section

SectionHeading

ProjectCard

ProjectGrid

ProjectMeta

CaseStudyHero

CaseStudySection

Metric

BrowserMockup

PhoneMockup
ImageFrame
ProcessDiagram
UserFlow
DesignSystem
Timeline
CapabilityGroup
ContactCTA
Footer

Do not duplicate components unnecessarily.

50 — PROJECT DATA

Keep project data separate from UI.

Example:

projects.ts

Each project:

id
slug
title
category
year
role
duration
description
challenge
outcome
tools
hero
gallery
metrics
placeholder

This should make replacing portfolio content extremely easy.

51 — CONTENT DATA

Keep all editable content in centralized files where practical.

Example:

```
content/  
profile.ts  
projects.ts  
experience.ts  
capabilities.ts  
navigation.ts
```

This allows me to update content without searching through components.

52 — IMAGE REPLACEMENT

Make it obvious where I replace placeholders.

Example:

```
const PROJECT_IMAGES = {  
  hero: "/images/projects/pharmacy/hero.png",  
  homepage: "/images/projects/pharmacy/home.png",  
  product: "/images/projects/pharmacy/product.png"  
}
```

When I later replace the file, the design should update automatically.

53 — PLACEHOLDER LABELING

Do not visibly display:

"AI Generated"

Do not visibly display:

"Placeholder Image"

unless necessary for editing.

Instead:

Use subtle developer comments.

Example:

// PLACEHOLDER — replace with final project image

For factual placeholders:

[ADD VERIFIED METRIC]

is acceptable.

54 — NO LOREM IPSUM

Never use Lorem Ipsum.

Write realistic portfolio copy.

When facts are unavailable, use explicit placeholders.

55 — NO FABRICATED RESULTS

This is mandatory.

Never invent:

Conversion rate

Revenue

Users

Traffic

Retention

Awards

Client quotes

Company names

Project dates

Business impact

If unavailable:

[ADD VERIFIED METRIC]

56 — PROJECT METRICS COMPONENT

Build a reusable metric component.

Example:

+XX%

Conversion

[VERIFY]

or

XX%

Task completion

[VERIFY]

The visual component should be ready for real data later.

57 — BEFORE / AFTER COMPONENT

Create reusable:

Before → After

component.

For example:

BEFORE

Fragmented navigation

AFTER

Clear information hierarchy

BEFORE

Unclear product information

AFTER

Structured product details

Use this for UX storytelling.

58 — ANNOTATION SYSTEM

Create visual annotations around UI.

Examples:

Improved CTA hierarchy

Reduced cognitive load

Clear prescription upload

Simplified navigation

Improved product comparison

Use thin connector lines and small labels.

Keep annotations elegant.

59 — CASE STUDY NAVIGATION

At bottom:

Previous Project

Next Project

Back to Work

Example:

← Back to Work

Next:

Healthcare Management Platform →

This should make the portfolio feel like a curated publication.

60 — VISUAL DETAILS

Add subtle details such as:

Project numbering

Small metadata labels

Grid lines

Section counters

Image captions

Small arrows

Micro typography

Thin dividers

Occasional oversized numbers

But do not decorate for decoration's sake.

Every visual element should support hierarchy.

61 — DARK MODE

If appropriate, implement dark mode.

Do not make it mandatory if it compromises the visual identity.

If implemented:

respect system preference

allow manual toggle

persist preference

test contrast

test images

test case studies

62 — CURSOR

A custom cursor is optional.

Only implement it if it genuinely improves the interaction.

Do not create:

huge circles

trailing blobs

unnecessary distortion

The default cursor is preferable to a bad custom cursor.

63 — MICROINTERACTIONS

Use:

Arrow → movement

Button → subtle shift

Card → image scale

Image → reveal

Navigation → active state

Link → underline transition

Keep duration approximately:

150–400ms

Use appropriate easing.

64 — REDUCED MOTION

Respect:

prefers-reduced-motion

When enabled:

disable large transitions

remove unnecessary transforms

keep content immediately accessible

65 — DESIGN QUALITY BAR

Judge every screen against:

Apple

Linear

Stripe

Notion

high-end digital studios

top-tier product design portfolios

But DO NOT COPY them.

The quality target is:

Premium

Minimal

Intentional

Highly usable

Visually memorable

66 — IMPORTANT: DO NOT OVERDESIGN

The work must remain the hero.

If an interaction competes with a case study:

remove it.

If an animation slows down reading:

remove it.

If a decorative element reduces clarity:

remove it.

If a layout looks impressive but hurts usability:

choose usability.

67 — IMPLEMENTATION ORDER

Work in this order:

PHASE 1

Establish project architecture.

PHASE 2

Create design tokens.

PHASE 3

Create typography and grid.

PHASE 4

Create reusable components.

PHASE 5

Create homepage.

PHASE 6

Create Work page.

PHASE 7

Create CaseStudy template.

PHASE 8

Create six project case studies.

PHASE 9

Create About.

PHASE 10

Create Contact.

PHASE 11

Create responsive layouts.

PHASE 12

Create interactions.

PHASE 13

Accessibility review.

PHASE 14

Performance review.

PHASE 15

Visual polish.

PHASE 16

Final UX review.

68 — DO NOT STOP EARLY

Do NOT stop after:

creating the hero

creating a wireframe

creating one project

creating a component library

or explaining what should be done.

Actually build the website.

If you need to make reasonable implementation decisions, make them.

Do not repeatedly ask me for approval.

69 — WHEN INFORMATION IS MISSING

Do not stop.

Use:

[ADD INFORMATION]

[ADD VERIFIED METRIC]

[ADD CLIENT]

[ADD DATE]

[ADD LINK]

For visual assets:

GENERATE A HIGH-QUALITY PLACEHOLDER.

70 — FINAL QA

Before presenting the result, inspect the entire site.

Check:

NAVIGATION

Does every link work?

HERO

Is the value proposition immediately clear?

WORK

Can projects be scanned quickly?

CASE STUDIES

Does every project tell a coherent story?

IMAGES

Are there any broken images?

Are placeholders visually polished?

RESPONSIVE

Does anything overflow?

MOBILE

Does the design feel intentionally mobile?

ACCESSIBILITY

Can the entire site be navigated with keyboard?

PERFORMANCE

Are unnecessary assets loaded?

CONTENT

Are there any invented facts?

VISUAL

Does the portfolio look cohesive?

UX

Can a recruiter understand my capabilities quickly?

CONTACT

Can someone easily contact me?

71 — FINAL POLISH PASS

After the first implementation, perform a second design pass.

Look specifically for:

Generic-looking sections

Repeated layouts

Excessive cards

Weak typography

Poor spacing

Inconsistent alignment

Weak project thumbnails

Unnecessary animation

Bad mobile layouts

Unclear CTAs

Weak case-study storytelling

Placeholder visuals that look obviously fake

Fix these issues.

72 — FINAL PRINCIPLE

The website is itself my strongest portfolio project.

A visitor should leave thinking:

"This designer understands UX."

"This designer understands visual design."

"This designer understands systems."

"This designer understands business problems."

"This designer can work with developers."

"This designer knows how to communicate design decisions."

Do not communicate this through claims.

Demonstrate it through the website.

73 — BEGIN

Start building now.

First establish the design system and architecture.

Then build the homepage.

Then the Work experience.

Then the case-study template.

Then populate all six projects with realistic content and polished placeholder visuals.

Then complete About and Contact.

Then perform the full responsive/accessibility/UX/visual QA.

Do not give me a long explanation before doing the work.

BUILD THE PORTFOLIO.
